Seminar Title: Career Opportunities in Cyber Security

Speaker: Shoba and Srini Malarapu Date: 3/10/23

The session was	Strongly Disagree	Disagree	Agree	Strongly Agree
Informative.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Enjoyable.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Relevant.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Inspirational.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Worth my time.	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

I learned something new about	Strongly Disagree	Disagree	Agree	Strongly Agree
New opportunities for CS majors	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Enhancing my career potential as a CS major	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

Cyber Security Career Opportunities – 5 key takeaways from the seminar

(Need to be completed in at least 100 words in order to get credit)

One takeaway I got from the seminar is that when it comes to cybersecurity, what we are considering is all the elements of the infrastructure that can affect it, like cloud, applications, network, and so on. Another takeaway I got from the presentation is that cybersecurity is a field that can be a part of many industries, like finance, health care, critical infrastructure, transportation, manufacturing technology, and all other sorts of industries. A third takeaway I got from this presentation is that regardless of if one has a degree or certifications, it can often be very hard to find a career in cybersecurity as clients will often have varying needs and because they often want to make sure that they are hiring the right company or the right group of people. A fourth takeaway is that in terms of experience you may want, people often prefer that you have experience defending from cyber security attacks, rather than penetrating into something. This is mainly because it shows that you are not an amateur and because it shows that you might do well when it comes to assessment projects. One last takeaway I got from this project is that there are many services that can go into cybersecurity, like social engineering, penetration testing, vulnerability assessments, security policies and procedures, and so on.

How can this session be improved? (write in the space below)

We did get to go over cybersecurity services a bit, but I was kind of left wondering if there were other ways to get involved in cybersecurity apart from the links that were given to us in the presentation. Apart from that, I think the presentation went really well.
