

## Team Big Data Energy

### Sprint 10 Retrospective

#### 1) Inspect how this Sprint went with regards to people, relationships, process, and tools

We are working on the documentation to finish off this project. We all have parts of tasks to work with the documentation and it should be done before the due date.

Our last meeting with our client went well and is satisfied with the completion of the project as well as what was included in our manuals that we shown him so far.

#### 2) Identify and order the major items that went well and potential improvements

At this point, there is no future sprint so there are no potential improvements for the next sprint, but we did especially well in communication considering that we have mostly been meeting online and not seeing each other in person throughout the whole project.

We have generally done a really good job of keeping up with our tasks and staying on track with things. While there were some minor hiccups along the way, we have managed to pull through and finish this project.

#### 3) Create a plan for implementing improvements to the way your team does its work

There is nothing new we need to work on except finishing up the manuals. Progress seems to be good on that so we do not need to adjust our current trajectory and we should be getting all the stuff done before the deadlines.

Something I would work on more in the future with group projects will be to keep everybody updated in public channels when there are bugs, just in case these are wider spread than initially thought. Also I will do more peer coding sessions to help with the transition when someone new starts working on an aspect of development they haven't been on before.
