

**CSC28 Fall 2020**  
**Propositional Logic**  
(total 50 points)

Dr Jagan Chidella

**Please answer the following questions.**

**1) (i)** Let  $p$  denote “He is rich” and let  $q$  denote “He is happy.” Write each statement in symbolic form using  $p$  and  $q$ . Note that “He is poor” and “He is unhappy” are equivalent to  $\neg p$  and  $\neg q$ , respectively.

- (a) If he is rich, then he is unhappy.
- (b) He is neither rich nor happy.
- (c) It is necessary to be poor in order to be happy.
- (d) To be poor is to be unhappy.

**(ii)** Let  $p$  be “It is cold” and let  $q$  be “It is raining”. Give a simple verbal sentence which describes each of the following statements:

- (a)  $\neg p$
- (b)  $p \wedge q$
- (c)  $p \vee q$
- (d)  $q \vee \neg p$ . In each case, translate  $\wedge$ ,  $\vee$ , and  $\sim$  to read “and,” “or,” and “It is false that” or “not,” respectively, and then simplify the English sentence.

**(4 + 4) points + 2 points for neatness.**

**2)** Construct the truth table of:

$$\neg \left( \left( (\neg p) \vee (\neg (q \leftrightarrow (\neg q))) \right) \right) \wedge \left( (p \leftrightarrow p) \rightarrow (q \leftrightarrow (\neg q)) \right)$$

**(2 points) + 1 point for neatness.**

**3) (a)** Verify that the proposition  $(p \vee \neg(p \wedge q) \vee q)$  and proposition  $((\neg p \leftrightarrow \neg q) \leftrightarrow (q \leftrightarrow r))$  is a tautology or not. (using truth tables)

**(b)** Consider the conditional proposition  $p \rightarrow q$ . The simple propositions  $q \rightarrow p$ ,  $\neg p \rightarrow \neg q$  and  $\neg q \rightarrow \neg p$  are called, respectively, the converse, inverse, and contrapositive of the conditional  $p \rightarrow q$ . Find if any of these propositions are logically equivalent to  $p \rightarrow q$ ? (using truth tables)

**(2 + 2 points) + 2 points for neatness.**

**4)** Give the inverse, contrapositive, and converse for each of the following statements:

**(a)** If it rained last night, then the sidewalk is wet.

**(b)** If I ride a roller coaster then I will get sick.

**(c)** If 2 is a prime number, then 7 is an even number.

**(d)** If two angles are congruent, then they have the same measure.

**(e)** If  $8 < 6$ , then  $6 < 4$ .

**(5 points + 1 point for neatness)**

**5)** Translate each English sentence into a logical expression using the propositional variables defined below. Then negate the entire logical expression using parentheses and the negation operation. Apply De Morgan's law to the resulting expression and translate the final logical expression back into English.

R: the candidate has written permission from his guardian.

S: the candidate is at least 20 years old

T: the candidate is at least 14 years old

**(a)** The candidate has written permission from his guardian and is at least 14 years old.

**(b)** The candidate has written permission from his guardian or is at least 20 years old.

**(2 points) + 1 point for neatness**

6) Prove without truth tables to show the following (Hint: use a series of known logical equivalences to go from one proposition to the other):

$$(a) [\neg(p \wedge q) \vee (p \wedge q)] \equiv T$$

$$(b) \neg(\neg p \wedge q) \equiv p \vee \neg q$$

$$(c) \neg p \wedge (p \vee q) \equiv \neg p \wedge q$$

$$(d) \neg(\neg p \vee (p \vee q)) \rightarrow q \text{ is a tautology}$$

**(4 points) + 1 point for neatness.**

7) Translate the following predicate logic to English. Let  $H(x)$  represent "x is happy," let  $C(y)$  represent "y is a computer," and let  $O(x, y)$  represent "x owns y." (The domain of discourse for x consists of people, and the domain for y consists of inanimate objects.)

(a) Jack owns a computer

(b) If Jack owns a computer, then he's happy

(c) Everything Jack owns is a computer

(d) Everyone is happy

(e) Everyone is unhappy

(f) Someone is unhappy

**(6 points) + 1 point for neatness**

**8)** In the following question, the domain is a set of students who show up for a test. Define the following predicates:

$R(x)$ :  $x$  showed up with a Red-pen

$B(x)$ :  $x$  showed up with a Blue-pen

Translate each statement into a logical expression. Then negate the expression by adding a negation operation to the beginning of the expression. Apply De Morgan's law until each negation operation applies directly to a predicate and then translate the logical expression back into English.

(a) At least one of the students showed up with a Red-pen.

(b) Every student who showed up with a Blue-pen also had a Red-pen.

**(2 points) + 1 point for neatness.**

**9)** Which of the following arguments are invalid and which are valid? Prove your answer by replacing each proposition with a variable to obtain the form of the argument. Then prove that the form is valid or invalid. The symbol with dots has the meaning: "*therefore or implies*".

(a) Rohit has football or basketball or both  
Rohit has basketball or volleyball or both

---

$\therefore$  Rohit has football or volleyball

(b) Rohit studied for the exam or Rohit failed the exam or both.  
Rohit passed the exam.

---

$\therefore$  Rohit studied for the exam.

(c) 2 is an odd integer or 2 is a negative integer.  
2 is not a negative integer.

---

$\therefore$  2 is an odd integer

**(3 points) + 1 points for neatness.**

**10)** Give the form of each argument. Then prove whether the argument is valid or invalid. For valid arguments, **use the rules of inference to prove validity.**

(a) If Rohit gets money then Rohit will buy car and house.  
Rohit won't buy house.

---

∴ Rohit will not get money

(b) Rohit will buy car and house only if Rohit gets money.  
Rohit not going to get money.  
Rohit will buy house.

---

∴ Rohit will not buy car

**(2 points) + 1 point for neatness**
