What are your key learnings from the Seminar?
(Need to be completed in at least 100 words in order to get credit)

I learned that being an entrepreneur means more than just being a leader. It means creating value for others and having empathy for those around you. Apart from intentionally seeing things as opportunities all the time, it is important to be able to see the big picture and have a broad view of things. We often get caught up in things that deeply distract us, but it is important to have some openness for other opportunities and perspectives. It is also important to be constantly learning and to be able to embrace failure. It is also important to have a solid vision of what you want to do or where you want to go.

How can this session be improved? (write in the space below)

This session was pretty good, but part of me was hoping to see some more real life examples of the benefits of the principles that Cameron was talking about.
